LAND & WATER
Innovation. Inspiration. Results.

NENTHEAD SCREENING TRIALS

A legacy of mine working for the Coal Authority required a study into waste classification treatment and disposal options for metal rich sediments in the River Nent.

Land & Water were appointed by Ramboll to support the trials and transport the material to a suitably licensed disposal facility.

Project Delivery

- Long reach excavator employed on the banks of the River Nent to dredge material from several check weirs
- Some material retained for trials which included screening and separating and recording of data
- All material then transported to a suitably licensed disposal facility

The remote location of the site made this project challenging but it was achieved to the satisfaction of the client.

Project Particulars

- The project was completed for Ramboll
- The works were completed March 2016
- Dredging and screening trials
- Long reach excavator employed

PROJECT VALUE: £70,000
