

SOUTH EAST HYDROMETRY & TELEMETRY

For this contract, we were employed to complete maintenance works on several waterside huts used to house data collection equipment (H&T).

Sites included Gypsy Lane, Stanstead Springs, Marsh Farm, High Ongar and Chipping Ongar gauging stations, where the EA had undertaken inspections and prepared maintenance reports for works required to rectify issues found.

Works included roof repairs and replacement, asbestos surveys and demolition, installation of new buildings/huts.

Land & Water also engaged with Byrne Lobby, their appointed designers, to produce designs that were then approved by the client.

L&W were required to clear emergent reed growth up and downstream of a gauging weir and to undertake remedial works around the gauging hut to mitigate against heavy river flows eroding the foundations.

Our expertise in waste disposal meant we could deploy D1 exemption licences to minimise environmental impacts of our works and use our specialist long reach excavators to undertake works.

Some sites were extremely remote with others being accessed through public areas which meant planning was critical to successful delivery.
