

## BOULTER'S LOCK

Land & Water was contracted under the Environment Agency (South East) to improve the access and security to the weir at Boulter's Lock, East of Maidenhead at Sunbury on the River Thames.

### Project Delivery

- Works included the installation of palisade fencing and a pedestrian gate at the weir structure, installation of additional anti-vandalism and anti-climb structures to the existing gate and replacement of handrailing at the approach to the access gate.
- Land & Water worked alongside one of its key supply chain subcontractors on this project who fabricated the new structures.
- One of the main challenges faced during the project was accessing the work site, which was located on an island on the River Thames. Labour resource was ferried across with materials and structures being transported by hopper and tug to the location.
- Installation was labour intensive on this project with works being completed on time and on budget to the clients satisfaction.
